

A FLY AND LICE POUR-ON FOR CATTLE

BLAZE is an SP pour-on for the prevention of nuisance fly and control of biting and sucking lice

- Deltamethrin (SP) pour-on for cattle
- Provides up to 4 weeks protection against nuisance fly
- Provides control of biting and sucking lice
- Nil milk withholding period, so perfect for use in the dairy shed

Registered for:

BLAZE prevents nuisance fly and controls biting and sucking lice in cattle.

BLAZE is a water-based synthetic pyrethroid (SP) pour-on containing the active deltamethrin. Deltamethrin repels flies from landing, kills flies on contact and controls biting and sucking lice.

Use BLAZE when nuisance flies are first seen in the shed – usually late spring. Treat early before the fly population builds, and then every month while conditions are favourable for flies.

Withholding times:

Milk: Nil

Meat: 28 days

Bobby calf: Nil (calves that have suckled cows treated with BLAZE)

Application:

Product must be applied with a COOPERS T-bar gun. Apply in a wide continuous strip from between the ears to the tail, down the midline, to ensure even dispersion of product down both sides of the animal.

Dose rate:

1mL/20kg for fly and lice

Liveweight	Dose	Doses per pack	
		2.5L	5L
Up to 100kg	5mL	500	1,000
101-200kg	10mL	250	500
201-300kg	15mL	166	333
301-400kg	20mL	125	250
401-500kg	25mL	100	200
501-600kg	30mL	83	166
Cattle over 600kg	5mL/100kg liveweight
