

A LICE POUR-ON FOR SHEEP

WIPE-OUT is an SP pour-on for the control of lice and keds on sheep and goats

- Deltamethrin (SP) pour-on for sheep and goats
- 20 weeks control of lice
- 13 weeks protection against reinfestation
- 3 day meat withholding period
- Rainfast

Registered for:

WIPE-OUT provides 20 weeks control of lice on sheep and goats and 13 weeks protection against reinfestation.

WIPE-OUT contains the active deltamethrin, a synthetic pyrethroid that kills lice on contact and remains active in the fleece to provide long-lasting protection.

WIPE-OUT is a great choice whenever lice-control is needed. Best used off-shears, whether shearing in Summer, pre-tup, or pre-lamb, WIPE-OUT will make sure lice are not a problem in your flock.

Dose rate:

WIPE-OUT can be applied to strong-wool breeds with up to 6 months wool growth, and fine-wool breeds with up to 3 months wool growth, at the dose rates below:

Liveweight	Dose <4 month wool growth	Doses Per Pack		Dose 4–6 month wool growth	Doses Per Pack	
		1L	11L		1L	11L
up to 10kg	2mL	500	5,500	4mL	250	2,750
11-20kg	4mL	250	2,750	8mL	125	1,375
21-30kg	6mL	166	1,833	12mL	83	916
31-40kg	8mL	125	1,375	16mL	62	687
41-50kg	10mL	100	1,100	20mL	50	550
51-60kg	12mL	83	916	24mL	41	458
61-70kg	14mL	71	785	28mL	35	392
71-80kg	16mL	62	687	32mL	31	343
81kg +	2mL/10kg	-	-	4mL/10kg	-	-

Withholding times:

Meat: 3 days

Milk: 35 days

Wool Harvest Interval: 60 days

Application:

Apply the recommended dose as set out below as a continuous strip along the midline from between the ears to the tail using a COOPERS T-Bar gun. WIPE-OUT is rainfast, so is fine to apply to wet sheep.

It is best practice to apply WIPE-OUT off-shears (within 24 hours after shearing).
