

## A FLY AND LICE CONCENTRATE FOR SHEEP

**ZENITH Concentrate is a water-based IGR dip and jetting concentrate for the prevention of flystrike and control of lice**

- Diflubenzuron (IGR) saturation dip for sheep
- Prevention of blowfly strike and control of lice
- Nil meat withholding period
- For use by plunge dip, shower dip or jetting
- Provides up to 12 weeks fly control
- Provides 20 weeks lice control

### Withholding times:

Meat: Nil

Milk: 35 days

**Wool Harvest Interval:** 60 days

### Application:

Product may be applied by plunge dip, shower dip or jetting for flystrike prevention. Saturation dip is required for lice control – apply as plunge or shower dip to sheep with short wool. For lice the optimum time for application is 14-35 days after clean-shearing, or 14-28 days after cover-comb shearing.

### Mixing rate:

Application	Mixing Rate	Doses per 5L Pack
Shower/ Plunge Dip	150mL per 100L of water	*1,666
Jetting	250mL per 100L of water	*1,000

\*Doses per pack calculation: 2 litres dipwash per sheep

### Registered for:

ZENITH Concentrate prevents blowfly strike for up to 12 weeks, and controls lice for at least 20 weeks.

ZENITH Concentrate is an insect growth regulator (IGR) fly and lice saturation dip for sheep, containing the active diflubenzuron. Diflubenzuron acts by interfering with the moulting and growth process causing death of blowfly larvae and lice nymphs.

ZENITH Concentrate is a fly and lice treatment in one, it is ideal for the prevention of flystrike throughout the fly season, and to ensure the control of lice at any time of the year.
